## We analyse your automation potentials.

Concept Development support by  
practitioners: money well spent.

To automate in a targeted and profitable way is not that easy. Our experts analyse your production environment and propose feasible automation concepts. The concepts are developed together with your specialists and optimal solutions are defined. Our advice is based on many years of practical implementation experience. What we design we are prepared to implement for you.

## Our services.

What can you expect from us?

### Concept.

- » Fixed costs for analysis and concept work
- » Inspection of your production
- » Workshop with your specialists
  - How do processes and logistics work?
  - Where is the greatest potential for automation?
  - What is your budget framework
- » Idea search
- » Concept development
- » Elaboration of a «Basic Digital Twin» for visualisation
- » Cost estimates
- » ROI calculation
- » Concept presentation

### Engineering.

Based on the concept you can request the engineering to execute automation for one or more areas with potential.

### Implementation.

Based on the engineering, we design every detail, produce and procure the necessary mechanics and components, create the electrical system and develop the software. The turnkey solution from a single source.

## Your advantages

- » **Concepts developed by practitioners**
- » **Basic Digital Twin for visual representation for decision-makers**
- » **Cost estimates**
- » **ROI calculation as a decision criteria for your investment**
